

## Cooperating Technical Partners – ASFPM CTP subcommittee Monthly Call – December 11, 2023

Attendees: Alan Lulloff, Dave Guignet, Laura Algeo and Brooke Seymour.

### CTP Conversation

We discussed the survey for CTPs to get feedback on the CTP Conversation and Social that will be held in Salt Lake City. Joanna Rohlf has drafted some questions and with input from Laura Algeo. ASFPM staff have put the questions into Survey Monkey.

We discussed the best list of people to send the questionnaire. We have the sign-in list from the Raleigh conference and a list of people from a CTP contact list matched against the people that attended Orlando and Raleigh. It was suggested that we post something on the basecamp site and include a mention in the CTP collaboration monthly.

There are contractors on the list of people that attended the event in Raleigh. We agreed that the question should be sent to them also.

### Recent webinar

A webinar on FEMA's Future of Flood Risk Data initiative was had on November 28, 2023.

### Future CTP webinars

The webinar that was suggested by Shubha Shrivastava, Mitigation Planner, in the Planning & Safety Branch of FEMA's Risk Management on "Integrating floodplain management planning and mitigation planning to maximize CRS participation and benefits" will be held during the January to March, 2023 timeframe. There have been some changes made to the guidance to better align the two processes so that local communities can maximize their CRS points when they develop/update their mitigation plan.

2D modeling – The 2D Integrated Planning Team effort has been suggested for a webinar. The 2D modeling efforts associated with the 2D IPT could then be the topic for the April – May timeframe. While all of the tasks associated with the 2D IPT will not yet be completed providing a status update would be doable.

### ASFPM Project

ASFPM has been funded to interview communities that have received floodways developed with 2D modeling. The areas where communities have been identified are South Dakota, Kentucky and Colorado.

An interview was held on October 12<sup>th</sup> with Brookings, SD. Another interview was held with a Kentucky community on December 6<sup>th</sup>. They indicated the state held a virtual meeting to discuss the maps. They indicated that they would like some posted in the local newspaper. While it would generate calls they would prefer calls up front rather than later.

Laura indicated that they recognize that fact sheets would be useful. It is unclear whether communities are aware that if evaluation lines are used to evaluate whether a proposal causes a rise in the floodway that the impacts can only be averaged along an evaluation line if no insurable structure is impacted. We have set up another interview with Carson City, NV for December 15<sup>th</sup>.
